TiffView V1.16: Command line parameters

1 Syntax

TiffView.exe <Filename>
TiffView.exe /p [/q][/r:n-m][/i:m,n,o...] <Filename>
TiffView.exe /?

2 Parameter

Name	Description
/p	The TIFF multi-page file to be printed. If /q is not defined, *TiffView* started, load the document and display the print dialog.
/q	Printing is done in the background. *TiffView* and/or the print dialog are not displayed. No function, if not at the same time /p was defined.
/i:1,2,4,6	Individual pages can be printed. This parameter is considered only if /p has also been defined.
/r:3-5	A range of pages can be printed. This parameter is considered only if /p has also been defined.
<Filename>	Name of the multi-frame TIFF file, which will be printed.
/?	*TiffView* is started and the help for the command line parameters is displayed.
